

NFON AG presents Nmeeting+ for dynamic creation of cloud-based web conferencing

No-holds-barred communication with desktop-sharing on every HTML5 browser. On display at the NFON booth. Visit CeBIT Hall 13, C58.

- > **Nmeeting+ is web-based management of web and HD audio conferencing**
- > **Nmeeting+ facilitates no-holds-barred choice of communication for customers**
- > **Simple costing model for Nmeeting+**

NFON AG, a leading global provider of cloud-based telephone systems, is presenting **Nmeeting+**, a web-based management system for web and audio conferencing, at CeBIT 2015 (Hall 13, C58). Max Schroeder, NFON's Senior Product Manager says: „*Nmeeting+ is an important development in dynamic conferencing capabilities, with collaboration features controlled directly by the Ncontrol conference management system.*“ With Nmeeting+, users of the NFON cloud-based telephone system can initiate ad hoc web conferencing during a live audio conference.

Nmeeting+ interoperates with all HTML5 browsers (Microsoft Internet Explorer, Mozilla Firefox, Google Chrome, Apple Safari) according to customer preferences. This additional important step in the digitalisation of business communications is an integral part of NFON's cloud-based telephone system. While audio conferencing is included as a core feature of the NFON system, the enhanced Nmeeting+ facility can be easily enabled by the customer at an additional cost.

**No restrictions
with any HTML5
browser**

„*NFON's cloud-based telephone system has over 150 intelligent features, is simple to operate and offers unlimited performance*“, says Jürgen Städing, Chief Product Officer of NFON AG.

„*Nmeeting+ is a straightforward and intelligent additional option which significantly simplifies collaboration between business users.*“

Subscribers to Nmeeting+ can collaborate in any way the customer chooses; the initiator of the web conference only needs a simple Mac or Windows client. The costing model for Nmeeting+ is equally simple: billing is either according to use, with a tariff unit of 0,15 € per minute, or on a flat rate of 15 € per month. Up to 25 people can take part in an Nmeeting+ session.

**Straightforward
costing model
for Nmeeting+**

The Nmeeting+ experience is just as perfect for desktops and notebooks as on tablets and smartphones. Subscriber advantages include savings on time and travel expenses as well as a

CeBIT 2015:

NFON AG at the pinnacle of digitalisation in Europe

London, 16th March 2015

noticeable increase in workplace and workflow efficiency. In the Nmeeting audio-conference management system, all in-house participants can see each other, and the conference leader can control the conference, (for example, bring in additional participants, mute the sound etc.). In addition, Nmeeting+ enables interactive desktop-sharing with both internal and external participants, with the conference leader taking control over collaboration views such as presentation, announcements and whiteboard.

> Note: The release of the products featured in CeBIT 2015 will also be rolled out outside Germany following adjustment for the international market. This is due to the numerous individual measures required, for example in legal provision, usability and localisation.

About NFON AG

Business communication worldwide is undergoing the biggest transformation in its history. A cloud-based telephone system is a future-proof investment for businesses. NFON provides unlimited performance for every requirement for businesses employing between 2 and 249,000 people. NFON is a 'Made in Germany' cloud solution, and stands for data protection, reliability and TÜV-certified sound quality. It is thanks to this, as well as its more than 150 intelligent features, its simplicity, cost-effectiveness and fundamental security features, that NFON AG has become a global provider. NFON AG operates in 12 European countries and is run by CEO Martin Czermin and four other executive directors. Its headquarters are in Munich.
