

Nconnect Voice

The smart interface between your old telephone system and the cloud.

The new freedom in business communications.

NFON
Cloud Telephone System

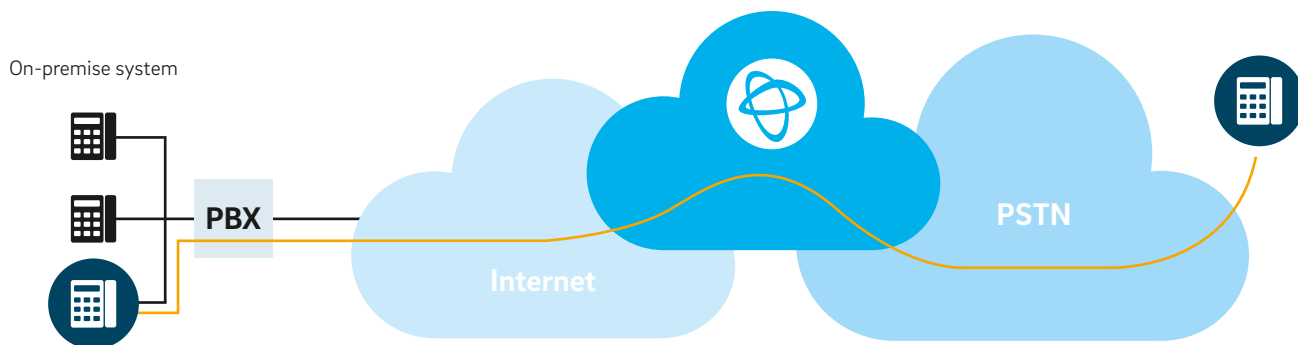

Nconnect Voice Moving Towards an All IP Future.

Nconnect Voice enables you to make a seamless transition towards flexible, scalable, IP communications. Using the Session Initiation Protocol (SIP), you can connect an existing legacy or IP PBX system with the NFON International Carrier Network to initiate, terminate, accept, reject, hold or redirect voice calls across all voice extensions. Rather than registering every dial-in number with an Internet Service Provider (ISP), Nconnect Voice registers complete number blocks, including the required capacity of concurrent voice channels. Inbound and outbound calls are made as usual, and with greater flexibility and security at lower costs.

- Easy integration of new services
- No hardware procurement for airtime termination
- Regulation-compliant, future-proof technology
- The one-stop solution for all office locations

All IP is Coming – Keep Your Options Open.

Nconnect Voice is a core technology for modern communications. By simply connecting a legacy or IP PBX system to Nconnect Voice, you will gain the flexibility to upgrade communications by adding services, quickly and at favourable costs, to meet demand just in time. You can keep your options open for tomorrow whilst profiting from the benefits of IP-based telephony today.

Provided your PBX vendor has certified Nconnect Voice, you can activate the service in a matter of minutes, without any specialist knowledge. After registration over the Internet, you will receive login credentials to connect with the NFON International Carrier Network, and the system is ready to go.

Choosing the Right Partner Gives You Peace of Mind.

Combining comprehensive knowledge, leading-edge technologies and streamlined processes, we have built a reputation of excellence in advanced cloud communications services. Our technical expertise in carrier and number management, international coverage and fail-safe data centres facilitate best-in-class services.

Offering a wide range of business communications services, we enable you to expand your infrastructure just in time, all from a single source: NFON.

PBX Vendor Certifications You Can Trust.

Nconnect Voice integrates easily with leading SIP gateways and IP telephone systems, and we obtain the certification of various PBX vendors to ensure interoperability between systems. Nconnect Voice enables you to place and receive inbound and outbound telephone calls, just as with conventional systems. It's even possible to port existing telephone numbers to the service or obtain new telephone numbers – it's all up to you. The Nconnect Voice service is compliant with all current regulations.

Nconnect Voice Services			
Nconnect Voice per call channel	Nconnect Voice small	Nconnect Voice medium	Nconnect Voice large
Up to 9 channels for (inbound / outbound) calls	10 concurrent (inbound / outbound) calls	20 concurrent (inbound / outbound) calls	50 concurrent (inbound / outbound) calls
Accounting rates per minute are equivalent to the Business tariff			
No installation fees			
Contract period: 1 month minimum
