

Operator Connect for Microsoft Teams*

Smooth operator

We get it!

You, plus the rest of the world, use Microsoft Teams* for all your internal comms and you're hearing that more and more companies are using it for their customer communications too. So now you're worried about getting left behind.

"No more disruption, thank you"

If introducing seamless business communications sounds disruptive, what about your employees using around 35 apps for everything from email to chat to video to tasks to phone calls. Switching more than 1,100 times every day¹. Aaaaarrgh!

"But business is OK as it is"

Technology is evolving faster than ever. If you don't keep up with the pace of change, you're going to get left behind. OK today will not be OK tomorrow.

What does good look like?

Whatever you use for your business communications, it has to be **simple to set up and simple to use**

Everyone can keep their own phone numbers and just start using them through the familiar Microsoft Teams* interface

Your team needs to have a seamless experience whether they're working from home, the office or a beach in Barbados

Imagine how much you could save by shedding some of those apps and all that redundant equipment

Provisioning numbers is a doddle with one admin portal only

NFON to the rescue!

With Operator Connect for Microsoft Teams*, we can integrate external calling and audio conferencing into Microsoft Teams* in a jiffy.

We provide a rock-solid PSTN connection and essential telephony features, using a SIP Trunk (we call it Nconnect Voice) for inbound and outbound calling. Sorted!

Why NFON?

- 🌐 Pan-European provider offering customer integration telephony in Microsoft Teams*
- 🌐 No outrageous set-up fees
- 🌐 Local 24/7 support in your own language
- 🌐 There's safe and secure – and then there's German safe and secure

NFON Operator Connect. Smooth Operator
